

Landscaping: THE CUTTING EDGE

Landscaping can provide health, environmental, and financial benefits. Even with water restrictions and suburban sprawl, landscape plays a large role in connecting us with nature and the importance of caring for our environment. Choose climate-appropriate plant species to reduce irrigation water, soil erosion, fertilizers, and pests and disease.

Save Water, Save Money

During a drought, use leftover water from the bath or sink in your garden. Don't use water that contains chemicals! In non-arid parts of the country, your lawn only needs to be watered once a month. Once fall rolls around, your lawn will bounce back to normal.

Your backyard is so much more than just your swimming pool. It's your escape on a long day and your retreat when there are sunny skies. Enjoy everything your backyard has to offer by adding a personalized poolscape. Poolscape is the environment surrounding your pool. Landscaping can have astronomical benefits for your backyard and your check book while also providing aesthetic enhancements.

Reuse

Over-watering can cause many problems with your lawn and plants including fertilizer releasing into ground water, shallow roots, weed growth, disease, and fungus.

Go Green

Home Value

Landscaping adds an average of 14.8% to the value of a home. These homes sell as much as five to six weeks faster than homes without landscaping.
